This republication of Hamiltons four great economic works comes at the instigation of American economist Lyndon LaRouche, who has stressed the urgency for an understanding of Hamiltons economic outlook to confront the profound economic crisis now erupting within the trans-Atlantic financial system. Hamiltons vision for the newly created United States was of an industrializing nation in which the human ability to develop and grow would lead to new technologies, new resources, and a national commitment to the future. This outlook, and the lessons to be learned from Hamiltons success, are of timely importance today. These four writings comprise three reports to the Congresshis Report on Public Credit, Report on a National Bank, and Report on Manufacturesand his Opinion as to the Constitutionality of the Bank of the United States. Together, these documents represent the kernel of Hamiltons thought, and the basis upon which the United States grew from a small agricultural nation to the worlds leading economy. Applying this outlook to the present, we include, following Hamiltons writings, Lyndon LaRouches 2014 policy proposal for Four New Laws to Save the U.S.A. Now. This is a handbook for needed economic growth today.
