**Robert F. Scott : The Voyage of the Discovery: Scott's First Antarctic Expedition, 1901-1904 (Volume I)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Voyage of the Discovery: Scott's First Antarctic Expedition, 1901-1904 (Volume I):

Antarctic explorer Robert Falcon Scott, who died near the South Pole in 1912, initially won his fame with a remarkable trip to Antarctica in 1901, aboard the *Discovery*. During this journey, Scott became the first man to see the South Polar ice cap and achieved a new 'farthest south' record. He explored the continent from the air via balloon and made a trip across the frozen wastes with Ernest Shackleton. In *Voyage of the Discovery*, the only work he lived to see published, Scott tells of his exciting and at times horrifying journey, in which he and his men faced blizzards, snow-blindness, the deaths of two crewmates, and a ship so trapped by ice that only dynamite could free it.
